

Appl. No. : 09/454,870
Filed : December 3, 1999

one or more system conditions, and means for modifying a process of transmitting the data packets from the server computer to the client computer, the modifying based at least in part upon the determined system conditions.

Cont. Yet another embodiment of the invention comprises a system for aggregating data packets, the system comprising a plurality of data packets that collectively comprise one or more streamable data objects, and a server computer operably connected to a client computer via a network, the server computer transmitting the data objects to the server computer, the server computer periodically determining, based upon the load of the server computer, whether to aggregate one or more of the data packets into an aggregated data packet.

Yet another embodiment of the invention comprises a method of aggregating data packets, the method comprising, determining, based upon the load of a server computer, whether to aggregate one or more of the data packets into an aggregated data packet, and transmitting the aggregated data packet to a client computer. --

REMARKS

Applicant respectfully submits that no matter has been added. Applicant has amended the specification to recite the features recited in the claims.

Please charge any additional fees, including any fees for additional extension of time, or credit overpayment to Deposit Account No. 11-1410. A duplicate copy of this sheet is enclosed.

Respectfully submitted,

KNOBBE, MARTENS, OLSON & BEAR, LLP
